

# Ansible Playbook Snippets/Scripts

- [Delete File](#)
- [Upload File to Remote Directory](#)
- [Set Fail Msg](#)
- [Reboot Windows Server](#)

# Delete File

## Delete Local

- name: Delete uploaded file at ansible centralize data location

file:

path: "/tmp/directory/filename.extension"

state: absent

delegate\_to: localhost

## Delete Remote

- name: Delete uploaded file at target machine

win\_file:

path: "C:\temp\abc.zip"

state: absent

# Upload File to Remote Directory

- name: Upload program file to target machine

win\_copy:

src: "/tmp/setup.exe"

dest: "{{targetlocation}}\\" # or "C:\\temp\\"

# Set Fail Msg

Set fail message when directory does not exist

```
- name: Check if src directory exist in target machine
win_stat:
  path: "{{ dirtoscan }}"
register: srcdir_data
- name: Skip if src directory exist
fail:
  msg: "Directory {{dirtoscan}} do not exist in {{inventory_hostname}}"
when: not srcdir_data.stat.exists
```

# Reboot Windows Server

```
- name: Reboot server
  win_reboot:
    connect_timeout: 1200
    reboot_timeout: 600 # Gives 5min to reboot
  register: rebootlog
  ignore_errors: yes
```
